Consortium for Advanced Residential Buildings (CARB)

Steven Winter - Steven Winter Associates, Inc.
50 Washington Street • Norwalk, CT 06854 • 203-857-0200
e-mail: swinter@swinter.com • www.carb-swa.com

Davis Energy Group

David Springer - Davis Energy Group
123 C Street • Davis, CA 95616 • 530-753-1100
e-mail: springer@davisenergy.com • www.davisenergy.com

IBACOS Consortium

Brad Oberg - IBACOS
2214 Liberty Avenue • Pittsburgh, PA 15222 • 412-765-3664
e-mail: boberg@ibacos.com • www.ibacos.com

Industrialized Housing Partnership (IHP)

Subrato Chandra - Florida Solar Energy Center
1679 Clearlake Road • Cocoa, FL 32922 • 407-384-2048
e-mail: subrato@fsec.ucf.edu • www.baihp.org

National Association of Home Builders (NAHB) Research Center

Tom Kenney - NAHB Research Center
400 Prince George's Blvd. • Upper Marlboro, MD 20774
301-430-6246 • e-mail: tkenney@nahbrc.org • www.nahbrc.org

National Renewable Energy Laboratory

Ren Anderson - 1617 Cole Blvd., MS-2722 • Golden, CO 80401 303-384-7433 • e-mail: ren_anderson@nrel.gov • www.nrel.gov

Oak Ridge National Laboratory

Pat M. Love - P.O. Box 2008 • One Bethel Valley Road • Oak Ridge, TN 37831-6067 • 865-574-4346 • e-mail: lovepm@ornl.gov • www.ornl.gov

US DOE Regional Offices

Central

Doug Seiter - U.S. Department of Energy • Central Regional Office
1617 Cole Blvd, MS 1521 • Golden, CO 80401 • 303-275-4810
e-mail: doug.seiter@ee.doe.gov • www.eere.energy.gov/regions/central

Mid-Atlantic

Susan Guard - U.S. Department of Energy • Mid-Atlantic Regional Office • The Wanamaker Building • 100 Penn Square East, Suite 890 Philadelphia, PA 19107-3396 • 215-656-6965
e-mail: susan.guard@ee.doe.gov • www.eere.energy.gov/regions/mid-atlantic

Midwest

John Devine - U.S. Department of Energy • Midwest Regional Office
One South Wacker Drive, Suite 2380 • Chicago, IL 60606-4616
(312) 886-8581 • e-mail: john.devine@ee.doe.gov
www.eere.energy.gov/regions/midwest

Northeast

Dan Strout - U.S. Department of Energy • Northeast Regional Office
JFK Federal Building, Suite 675 • Boston, MA 02203 • 617-565-9707
e-mail: Daniel.Strout@ee.doe.gov • www.eere.energy.gov/regions/northeast

Southeast

Tim Eastling - U.S. Department of Energy • Southeast Regional Office
75 Spring Street, S.W., Suite 200 • Atlanta, GA 30303 • 404-562-0575
e-mail: tim.eastling@ee.doe.gov • www.eere.energy.gov/regions/southeast

Western

Melissa Podeszwa - US Department of Energy • Western Regional Office • 800 Fifth Ave., Suite 3950 • Seattle, WA 98104-3122
206-553-2878 • e-mail: Melissa.Podeszwa@ee.doe.gov

Building America: Innovation in Home Building

Building America (www.buildingamerica.gov) is a private/public partnership sponsored by the U.S. Department of Energy that conducts systems research to improve overall housing performance, increase housing durability and comfort, reduce energy use, and increase energy security for America's homeowners. Program activities focus on finding solutions for both new and existing homes, as well as integrating clean onsite energy systems that will allow the homebuilding industry to provide homes that produce more energy than they use.

Building AmericaSM Performance Goal (Energy Savings)

Building America – New Construction

Each Building America team is constructing test houses and developing community-scale projects that incorporate its systems innovations. More than 26,000 energy-efficient houses have been built by the five teams to date.

The teams design houses from the ground up, considering the interaction between the site, building envelope, mechanical systems, and other factors, and recognizing that features of one component in the house can greatly affect others. This approach enables the teams to incorporate energy-saving strategies at little or no extra cost: new techniques for tightening the building envelope, for example, enable builders to install smaller, less expensive heating and cooling systems. Savings from the smaller HVAC system can then be used to purchase high-performance windows that further reduce energy use and costs. System trade-offs like these improve the quality and performance of a home without affecting its costs — to builders or buyers.

Building America – Integrated On-Site Power

New single-family homes are, on average, larger than ever before, and employ many more electrical appliances. More than 50% are being built in the sunbelt where the need for electricity is high because of summertime air-conditioning loads.

Building America's research on the integration of residential renewable and other on-site power systems focuses on identification of system engineering issues that must be resolved before the long term goal of large numbers of cost effective, marketable, zero net energy homes (ZEH) can be achieved.

Research into systems integration of renewable and other on-site power systems such as solar or fuel cells includes evaluation of cost tradeoffs between investments in energy efficiency and

on-site power systems, along with evaluation of net daily, monthly and annual energy contributions from such systems. Another important research area is Building America's monitoring and analysis of data from the growing numbers of homes at the upper end of the home market that are being constructed utilizing solar technologies as options to reduce some of their energy costs. Such research and development is especially necessary to effectively integrate and reduce the energy costs and at the same time increase the energy efficiency of homes being constructed by production homebuilders.

Building America – Existing Buildings

There are more than 101 million residential households in the United States today. Approximately 74 million of these households live in single family site-built homes, six million live in mobile homes/manufactured houses and 21 million live in multifamily buildings. Not surprisingly, existing residential buildings represent the single largest source of potential energy savings.

The objectives of the existing homes project of Building America is to establish technology pathways that reduce energy consumption in American homes. The existing buildings project will focus on finding ways to adapt the results from the new homes research to retrofit applications in existing homes. Research activities include a combination of computer modeling, field demonstrations and monitoring to develop integrated approaches to reduce energy use in existing residential buildings. Analytical tools will be developed to guide designers and builders in the selection the best approach for each application.
